

Exhibitors

The following companies are among those exhibiting at the conference:

| | |
|---|---|
|  | <p>Ecological Building Systems have been at the forefront of airtightness, windtightness and high performing natural insulations for over a decade. We're committed to supporting a sustainable built environment that reduces carbon emissions by promoting a 'fabric first' approach. We offer in-depth technical support, championing the use of more natural materials, optimising building performance, durability and a healthy living environment. Our systems provide low energy and Passivhaus solutions for all scenarios, both new build and retrofit.</p> |
|  | <p>Ecology Building Society</p> <p>Ecology specialises in lending for properties and projects that have a positive environmental or social impact. Our lending supports ecological new builds (including self-build and custom build), renovations/retrofits, conversions, and energy efficiency improvements. Our unique C-Change mortgages incentivise energy efficiency by basing mortgage rates on a property's climate impact, recognising standards including Passivhaus / EnerPHit and the AECB Building Standard. We welcome non-standard construction types.</p> <p>ecology.co.uk/mortgages mortgages@ecology.co.uk 01535 650 770</p> |
|  | <p>Green Building Store offers a wide range of products and services, including triple glazed timber & alu-clad windows and doors and advanced MVHR heat recovery ventilation, specialist airtightness & insulation products, and consultancy and building services. As a small specialist company with over 20 years' experience of working on low energy homes and buildings, we combine technical expertise with outstanding personal service and aftercare.</p> <p>Come to our stand to discuss MVHR heat recovery ventilation with our MVHR Design Manager or view some corner samples of our high-performance triple glazed window ranges.</p> <p>Tel: 01484 461705 www.greenbuildingstore.co.uk</p> |

“Exceptional timber frame buildings with a high-performance fabric-first approach.”

With over 25 years' experience, our houses begin life in our factory as fully engineered, insulated and air-tight closed panels. The units are then transported to site where a weather protected structure can be assembled in a few days. By using Warmcel cellulose fibre insulation along with timber and woodfibre lining boards, timber I-beams, timber windows, and timber cladding, carbon is locked-in to create a sustainable, healthy building that is comfortable and enjoyable to live in.

Warmcel has been awarded a Nature Plus Certificate. For technical information visit www.warmcel.co.uk

PYC Group: pycgroup.co.uk

RetrofitWorks is a multi-stakeholder cooperative of small to medium enterprises, which designs, develops and oversees locally focused programmes for the transformation of the existing housing stock.

It has achieved this with two groups of members driving and delivering local retrofit:

Practitioners: Those seeking work, both trades and professions.

Advocates: Organisations representing the interests of groups of local householders and tenants who understand their needs and want to develop the local retrofit market and supply chain to help them.

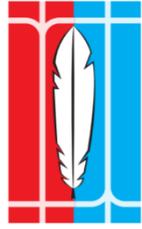

RetrofitWorks is run for and by each local community, building on existing local supply chains and services, and ensuring more economic and social value – wealth, jobs, skills – is retained in the local area.

Safeguard Europe Ltd is a UK-based company specialising in providing damp-proofing and waterproofing solutions for the construction industry. Safeguard was established in 1983 to produce products for the refurbishment of existing buildings.

SENECA

RADIANT

At Seneca Radiant UK we supply an innovative underfloor heating system for domestic and business customers. The floor panels are shaped to fit together for fast installation, avoiding the time and money need to fix to the sub-floor. Laminate wood flooring or similar can be immediately placed directly on top or for ceramic tiles, use screed board before affixing the tiles. The system also enables users to reduce their energy costs and help save the planet. The underfloor panels are made from flame retardant recycled rubber, therefore avoiding landfill or other pollution. Panels also reduce noise transmission to lower floors.

Triodos Bank

Triodos Bank is a global pioneer in sustainable banking, using the power of finance to support projects that benefit people and the planet. We believe that banking can be a powerful force for good: serving individuals and communities as well as building a more sustainable society.

We use our customer deposits to generate value in a transparent and sustainable way, through financing organisations working for positive change. Triodos isn't just a bank: we're changing the way banking is done.
